EDUCATION

• UNIVERSITY OF COLORADO, USA	Master of Science - Computer Science	3.70/4.00 GPA	Aug'19 - Dec'21
• CHAROTAR UNIVERSITY OF SCIENCE AND TECHNOLOGY, ANAND, INDIA	Bachelor of Technology - Computer Engineering	3.98/4.00 GPA	Jul'15 - Apr'19

SKILLS

• Programming	C, C++, Python, XML, FXML, HTML, CSS, JS, jQuery, PHP, AJAX, Magento PHP, OpenGL, Groovy, Shopify Liquid
• Database and Cloud Based	AWS, SQL, MySQL, SQLite, PostgreSQL, Hibernate, Google Cloud platforms, Squirrel SQL, Firebird
• Platform and Tools	Linux, IntelliJ, Android Studio, Kiro, Arduino CC, AD Missile, Smart Draw, UML, Simulink, GitHub, Visual Studio
• Hardware and Sensors	Arduino, Ultrasonic, Buzzer, Infrared, GPS, GPRS
• AI Tools	Cline, Kiro CLI, Wasabi, Amazon Q

PROFESSIONAL EXPERIENCE

12/21-Present	Amazon.com services, LLC	(Java, Swift, React/Typescript, JSP, AWS)	Software Dev Engineer
- Built and operated Amazon's real-time screen-sharing platform (MSS/Tarazed) that enables customer support associates to remotely view, annotate, and interact with customers' device screens across Fire Tablets, Fire TV, Echo, Android, and iOS in 10 global marketplaces — architected as a fully serverless, multi-region AWS system (Lambda, API Gateway, IoT Core, DynamoDB, CloudFormation/CDK) comprising session management, push notification, and TURN relay microservices. - Developed native mobile clients in Kotlin/Java (Android/FireOS) and Swift (iOS), a next-generation multiplatform device client in Rust with a modular state machine architecture, and a React/TypeScript (AC3) TSA-facing web interface with GraphQL Mesh — leveraging WebRTC for real-time video streaming. - Led multi-region expansion (RegionFlex) deploying backend services to new AWS regions with end-to-end infrastructure-as-code, integration testing, CloudWatch alarm migration, and traffic routing; drove AC3 modernization replacing legacy Goa framework, TURN re-architecture for cost reduction, Peru build-system migration, and S2DM/OTA device registration workflows. - Built an AI-powered oncall bot automating full oncall lifecycle – ticket triage with automated root cause analysis, issue resolving solution proposed, 30+ pipeline health monitoring, security/compliance risk aggregation and structured handoff report generation. - Designed and built scalable systems including a Fixed Price Promotion (FPP) engine for Trade-In upgrade discounts and Alexa+ upgrade integration — enabling self-service promotion configuration, 3x capacity scale-up through performance, optimization and content caching, and cross-platform accessibility improvements across www.amazon.com, while driving measurable business impact through enhanced Pre-Owned feature discoverability that boosted cart conversion rates and Prime Day sales. - Established strong team foundations and operational excellence by building documentation, onboarding and QA frameworks, and incident response processes; leading 30+ deployment pipelines, global on-call rotations, and Sev-2 triage; driving security compliance (Shepherd/SAS/PolicyEngine); and partnering cross-functionally to accelerate delivery quality, new hire ramp-up, and continuous delivery improvements.			
09/21-12/21	Eight Eleven Group LLC	(Java, JS, Node JS, Groovy, Python, MySQL)	Software Developer
- Worked at Client (Dish Network) location to identify possible production failure scenarios, created incident tickets, suggested enhancements and/or issue tickets in ticket tracking system, and communicated effectively with dev and business operations team. - Took ownership of escalations and performed troubleshooting, analysis, research, to enlisted proper representation from other IT support teams, and to drive towards resolution using advanced query and programming skills. Work closely with all support partners. - Implementing updates for OnTech Smart Service website to improve user experience and add new functionality like upsell and new inventory items for new partners using shopify liquid, and JS. Performed database update on daily basis to expand scope of sold products and installation services to more zip-code areas.			
01/20-05/21	University of Colorado – Denver	(Graduate Algorithms, Embedded System Programming, Software and Hardware Programming, IoT, Computer Architecture)	Graduate Teaching Assistant
Organizing hackathon based on core concepts of Algorithms, Leading laboratory section of 35+ students, facilitating discussions, solving problems, and addressing student's issues, creating weekly plans, activities and administering exams throughout the semester.			
08/20-12/20	University of Colorado – Denver		Graduate Research Assistant
Developing software for mobile battery enhancement and carrying out other duties that are in direct support of instructional activities like developing labs for courses, leading discussions or laboratory experiences, peer mentoring etc.			
12/18-04/19	Easyway 3E Solutions Private Limited, Vadodara, India	(Java, JavaFX, PostgreSQL, Selenium)	Software Developer Intern
- Implemented desktop application using core Java and AWT, JavaFx, GWT technologies and Scene Builder Tool for front-end design. Implemented solutions built upon object oriented and MVC programming best practice using Agile development methodology. - Compiled raw data retrieved from server and displayed them in an appropriate format. Managed and updated processed data to suitable server data format on client's server using API based application. - Developed a robotic bot which can open browser, load application, login, post advertisements on Snapdeal, Amazon, and Flipkart, logout user and close the browser in background using Selenium and Web Chrome Driver. Participated in all the aspects of desktop application life cycle.			
05/18-06/18	HUBiNCRED, Vadodara, India	(Java, XML, SQLite, Firebase)	Software Developer Intern
- Developed an android application for coaching class to manage student's attendance and Q&A Sessions using agile development methodology. - Managed front-end implementation based on life cycle and XML coding standards. Managed data using Google Firebase and used core Java for background data abstraction and logic building.			
12/17-12/18	CHARUSAT University, Anand, India	(HTML, CSS, PHP, JAVA, XML, MySQL)	Team Lead
Led technical support for university cultural, sports, and national-level technical events; designed event web portals (UMLET, SmartDraw) and built Android/web applications using HTML, CSS, JS, jQuery, Core Java, and XML, while serving as Executive Central Council member and managing large-scale fests to strengthen leadership and interpersonal skills.
